Teaching Philosophy & Profile

Ph.D. in Computational Mathematics with **15+ years of classroom teaching** across universities in Armenia and the UAE, combined with 20+ years of professional software engineering and active research. I believe rigorous computer-science education must connect theory to practice: my courses consistently move students from first principles to hands-on implementation using real systems.

Current areas of instruction span **programming (Java, C), system architecture, data structures & algorithms, operating systems, IoT & security, and statistics**. Active researcher in **explainable AI** applied to medicine, materials science, and precision agriculture via Polynomial Regression Models, and in LLVM-based automatic parallelisation (HPC++). 21 publications (18 public + 3 submitted to IEEE) and a track record of integrating research directly into the classroom. Currently **Chief Scientist** at [ExplainableAI.app](#) and **Assistant Professor and Course Team Leader** (multi-campus) at Higher Colleges of Technology, Abu Dhabi.

ExplainableAI.app

- Directing scientific strategy and model architecture for a no-code ML platform built entirely on intrinsically interpretable polynomial regression models — no black-box neural networks.
- Platform combines browser-side WebAssembly training (data never leaves the device), a hand-written C++ inference engine with sub-millisecond latency, and an AI App Builder (powered by Gemini) that turns any trained model into a shareable live web app.
- Applicable to any domain: users train models on any CSV or image dataset and deploy them as shareable live apps — no code, no infrastructure required.
